

Specify a reporting services server and data source

In order to successfully deploy the reports, you must specify a Microsoft Reporting Services Server and a data source for the report.

Type the name of the report server or select it from the drop-down list, and then click **Next**.

You must type the full URL address of the Microsoft Reporting Services Server. For example, `http://<ReportingServer>/reportserver`.

SQL **Diagnostic Manager** identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
