

Cluster Failover alert

The Cluster Failover alert indicates a change in the active node. This alert remains active for the amount of time specified in the alert's advanced settings.

To edit these settings, right-click the server in the Servers tree and select Configure Alerts. Click the **Advanced** button on the Cluster Failover Alert and edit the time.

Prevent cluster failover alerts when you have a scheduled failover

You can temporarily put the server into maintenance mode by right-clicking the server in the Servers tree and selecting Maintenance mode. When the scheduled failover is over, right-click the instance in the **Servers** tree and select **Disable Maintenance Mode**.

SQL **Diagnostic Manager** identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
