

Log Full (Size) alert

The Log Full (Size) alert provides the amount of disk space, in megabytes, currently used by the transaction log for the database. This value represents the actual amount of data within the log and does not represent the size of the database log file itself.

This alert is raised based on the database metrics collection interval specified in Server Properties. For more information, see [Set general server options](#).

SQL [Diagnostic Manager](#) identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
