Configure the IDERA Newsfeed Repository

The IDERA Newsfeed Platform lets you pick the Repository settings that best fit your environment and monitoring needs.

You can perform the following modifications:

- The Windows account or SQL login credentials that the SQLDM & Newsfeed Service uses to connect to the Repository database.
- The age limit at which the Repository grooming job permanently deletes stale activity and deleted or disabled objects.

If you have migrated the Repository to a new SQL Server instance, you can also change the name and location of the Repository database.

SQL Diagnostic Manager identifies and resolves SQL Server performance problems before they happen. Learn more > >
