

Configure the IDERA Newsfeed Repository

The IDERA Newsfeed Platform lets you pick the Repository settings that best fit your environment and monitoring needs.

You can perform the following modifications:

- The Windows account or SQL login credentials that the SQLDM & Newsfeed Service uses to connect to the Repository database.
- The age limit at which the Repository grooming job permanently deletes stale activity and deleted or disabled objects.

If you have migrated the Repository to a new SQL Server instance, you can also change the name and location of the Repository database.

SQL **Diagnostic Manager** identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
