Create a new SQL project

To create a new SQL project

1. Select **File > New > SQL Project** from the DB Optimizer Main Menu. The New Project Wizard appears.
2. Enter the appropriate information in the fields provided:
   - **Name**. Enter the name of the project as you want it to display in the Project Explorer view.
   - **DBMS Platform**. Select the data source platform to which the new project will be associated. This enables DB Optimizer to properly parse SQL development code for project files.
   - **Location**. When selected, the **Use Default Location** check box indicates the project is to be created under the currently selected Workspace. Deselect the check box and specify a new folder path if you do not want to create the project in the currently selected Workspace.
3. Click **Finish**. The new project icon appears in the Project Explorer view under the name that you specified. If you did not select **Use Default Location**, the project will appear in the appropriate Workspace when you open it in DB Optimizer.

ⓘ Alternatively, you can select **New > SQL Project** from the Main Menu or click the New Project icon in the Tool Bar to create a new project.
