

Install the Idera Dashboard

This section guides you through the installation of the Idera Dashboard, a common technology framework for Idera products.

Before you install the Idera Dashboard, be sure to have:

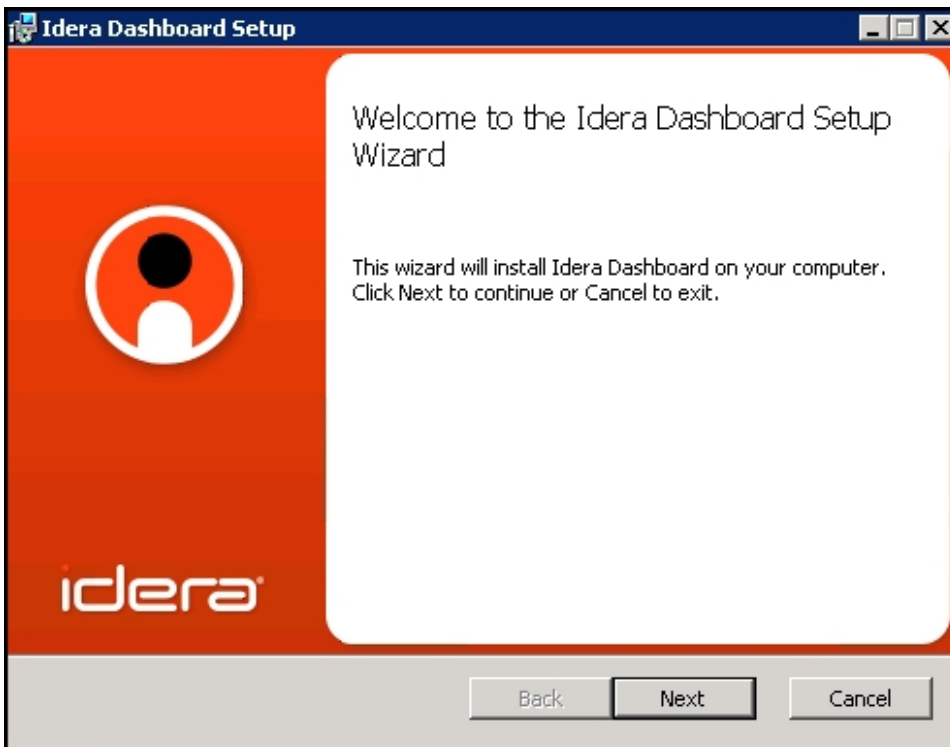

- A local administrator account on the machine you are installing the product.
- Microsoft .NET 4.0 Framework or later installed.

Start your installation

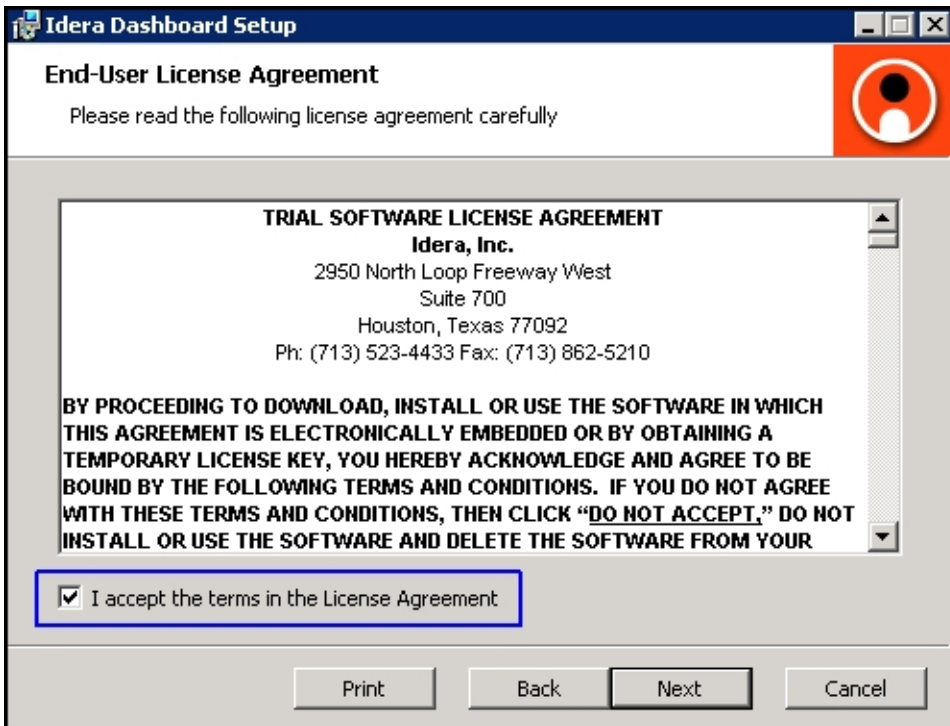

You can install the Idera Dashboard on any computer that meets or exceeds the [product requirements](#).

To start installing the Idera Dashboard:

1. Run `IderaDashboard` in the root of the installation kit.
2. On the **Welcome to the Idera Dashboard Setup Wizard**, click **Next** to continue with installation.

3. Review the license agreement. To accept this license agreement, click **I accept the terms in the License Agreement**, and then click **Next**.

Select an installation location

You can use the default install location or specify a different path (**Change**). For your first install, we recommend using the default location. Click **Next** to continue with the installation.

Select a Windows user account to use for the service account

The Idera Dashboard uses this account to connect, discover, and gather configuration information from SQL Servers in your Business environment. The installer grants the "Log on as a Service" right to the account that you specify.

To specify a service account:

1. On the Service Account window, type appropriate credentials in the provided fields under which the services run.
2. Click **Next**.

The screenshot shows the 'Idera Dashboard Setup' window with the 'Service Account' tab selected. The window title is 'Idera Dashboard Setup'. The main heading is 'Service Account'. Below the heading, it says 'Specify the account that Idera Dashboard services will run under.' There is a red circular icon with a white person silhouette in the top right corner. The main content area has a light gray background and contains the text 'The Idera Dashboard services will run under this account.' followed by 'Specify the service account:'. Below this, there are two input fields: 'Domain\UserName:' with the value 'simpsons\administrator' and 'Password:' with a masked password '.....'. Below the password field, it says 'The "Log on as a service" right will be granted to this account.' At the bottom, there are three buttons: 'Back', 'Next', and 'Cancel'.

Idera Dashboard Setup

Service Account

Specify the account that Idera Dashboard services will run under.

The Idera Dashboard services will run under this account.

Specify the service account:

Domain\UserName: simpsons\administrator

Password:

The "Log on as a service" right will be granted to this account.

Back Next Cancel

Select service ports to use for the Idera Dashboard

The Idera Dashboard uses ports **9290**, **9291**, and **9292** for the web application and dashboard services respectively. However, you can specify different service ports.

To specify a service port:

1. On the Service Ports window, specify the ports you want the web application and dashboard services to use.

The screenshot shows the 'Idera Dashboard Setup' window with the 'Service Ports' tab selected. The window title is 'Idera Dashboard Setup'. The main heading is 'Service Ports'. Below the heading, it says 'Specify the ports to be used by Idera Dashboard services.' There is a red circular icon with a white person silhouette in the top right corner. The main content area has a light gray background and contains the text 'The Idera Dashboard services will use these ports.' followed by 'Specify the ports:'. Below this, there are three input fields: 'Idera Dashboard Core Services Port:' with the value '9292', 'Idera Dashboard Application Service Port:' with the value '9290', and 'Idera Dashboard Web Application SSL Port:' with the value '9291'. Below the input fields, it says 'If Firewall is enabled make sure it allows TCP traffic through these ports.' At the bottom, there are three buttons: 'Back', 'Next', and 'Cancel'.

Idera Dashboard Setup

Service Ports

Specify the ports to be used by Idera Dashboard services.

The Idera Dashboard services will use these ports.

Specify the ports:

Idera Dashboard Core Services Port:	9292
Idera Dashboard Application Service Port:	9290
Idera Dashboard Web Application SSL Port:	9291

If Firewall is enabled make sure it allows TCP traffic through these ports.

Back Next Cancel

2. Verify that the Firewall allows TCP (Transmission Control Protocol) traffic through your specified ports.
3. Click **Next**.

Select a SQL Server instance to use for the Idera Dashboard Repository database

The Idera Dashboard Repository database is where the collected data, alert information, and alert configuration settings are stored.

To specify the SQL Server instance to install the Repository database on:

1. On the Repository Database screen, specify the host SQL Server instance you want to use for the Idera Dashboard Repository database.
2. Type the name for the Idera Dashboard Repository database.

The screenshot shows a Windows-style dialog box titled "Idera Dashboard Setup". The main heading is "Repository Database". Below the heading is a sub-instruction: "Specify the name and location of the Idera Dashboard repository database." There is a red circular icon with a white person silhouette in the top right corner. The main area contains the instruction "Specify the host SQL Server and the name of the Repository database." followed by two text input fields. The first field is labeled "SQL Server Instance:" and contains the text "(local)". The second field is labeled "Database Name:" and contains the text "IderaDashboardRepository". Below these fields is a section titled "Connection Credentials:" with the text "By default, the setup program uses the credentials of your Windows logon account to create the Repository database." There is a checkbox labeled "Use Microsoft SQL Server Authentication" which is currently unchecked. To the right of the checkbox is a button labeled "Change...". At the bottom of the dialog are three buttons: "Back", "Next", and "Cancel".

3. **If your SQL Server environment uses SQL Server Authentication**, select the check box and click **Change** to enter SQL Server credentials. By default, the Idera Dashboard uses your Windows credentials when connecting to the Repository database.
4. If you use Microsoft SQL Server Authentication, a new window displays where you can type the respective SQL Server login and password.
5. Click **Next**.

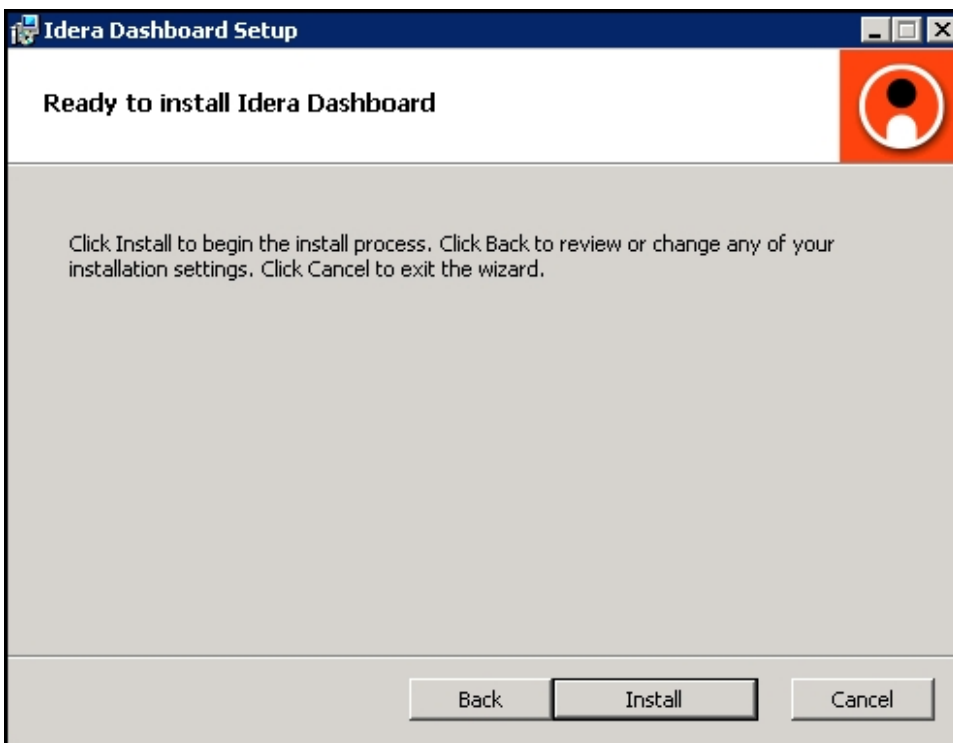

Grant access to the Idera Dashboard

The user that installs the Idera Dashboard has access to this application by default as a *Dashboard Administrator*. You can choose whether you want other users to have access to the Idera Dashboard in the [Administration](#) view. To continue with the installation, click **Next**.

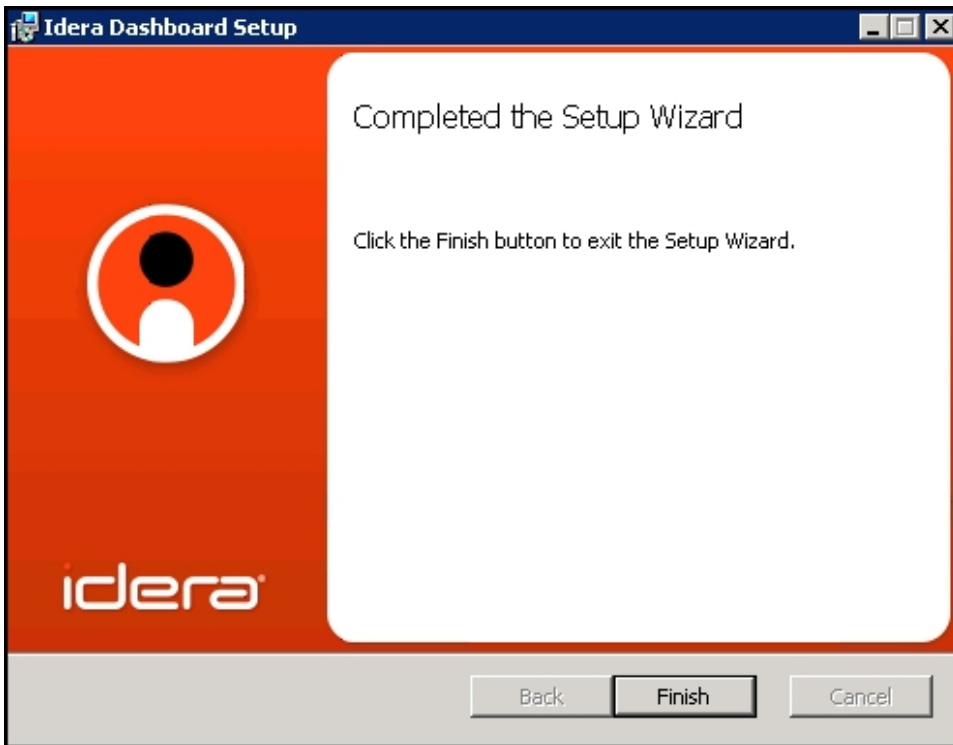

Complete the install

1. Click **Install** to indicate that you are ready to complete your installation with the configurations you specified. If you want to review or change any of your settings, click **Back**.

2. Click **Finish** to exit the Idera Dashboard Setup Wizard.

3. Proceed with the [SQL BI Manager Setup Wizard](#).

SQL [Business Intelligence Manager](#) identifies issues within the SQL BI environment to help optimize BI service performance. [Learn more](#) > >
