

Select databases for manual backup

The Databases tab of the SQLsafe Backup wizard allows you to specify the instance that hosts the databases, and the specific databases you want to back up.

 If your instance is not licensed, SQLsafe displays a warning message. Go to **License Key Manager** to enable the license for your instance.

What can you do on the Databases tab?

You can select the instance that hosts your target databases.

After you select the instance, the database list is populated. From the database list, select the databases you want to back up.

If you want to ...	Select this option ...
Back up all databases on the selected SQL Server instance	All Databases
Back up only User databases on the selected SQL Server instance	All User Databases
Back up only System databases on the selected SQL Server instance	All System Databases (master, model, msdb, distribution)
Back up only the databases you specify on the selected SQL Server instance	Specific Databases, and then choose the appropriate databases

Why isn't the target instance listed?

The instance list only includes SQL Server instances that have been registered with SQLsafe. If the instance is not in the dropdown list, you can choose to add a new instance by clicking **Register SQL Server**. For more information, see [Register an instance](#).

 **Tip**
You can click **Refresh** to update the list of your databases if you do not see the current information.
