

Edit instance properties

[Click here for 1.0 Documentation](#)

When you register an instance, you define certain properties such as credentials, owner, location, and comments. You can change this information from the **Edit Instance properties** window. To access this window go to any of the following views:

- **Dashboard - Edit properties** option on gear icon menu next to the instance name.
- **Instance details** window - **Edit properties** option on the action items bar.
- **Managed Instances** view - **Edit properties** option on the gear icon menu next to the selected instance or on the action items bar.
- **SQL Licensing** view - **Edit properties** option on the gear icon menu next to the selected instance or on the action items bar.

Below you can see the tabs and sections where you can find **Edit instance properties**. Click the image to view full size.

Tip

On the **Instances** view, on the **Managed** instances section, you can also select several instances at once and click **Edit Owner**, **Edit Location** or **Edit Credentials** for a faster edition of these fields. For more information about what you can do on the **Managed Instances** view, refer to [Managed Instances](#).

Editing Owner, Location and Comments

You can define owner, location, and comments when you register an instance; however, if you did not type them before, or you want to change any of these fields, go to the respective sections on the **Edit instance properties** window, make the necessary changes, and then click **SAVE**.

SQL connection credentials

These credentials allow you to connect to SQL Server instances to collect availability, capacity, and configuration data. When you register an instance, you define these credentials; however, you can change them later on the **Edit instance properties** window.

You can choose between a SQL Elements service account, a Windows user account, or a SQL Server login account. The last two options require that you provide the respective login and password.

Note

When SQL Elements has the [auto-registration option enabled](#), it uses the SQL Elements service account as the default SQL connection credentials.

WMI connection credentials

These credentials allow you to connect to the computer that hosts the SQL Server instance, and collect its performance and computer details. When you register an instance, you define these credentials; however, you can change them later on the **Edit instance properties** window.

You can choose between a SQL Elements service account or a Windows user account. You need to provide a login and password for the Windows user account.

Note

When SQL Elements has the [auto-registration option enabled](#), it uses the SQL Elements service account as the default WMI connection credentials.

Minimum requirements

For more information on what permissions you need for any of these accounts, click [here](#)..
