

Review details for manual restore

The Summary tab of the restore wizard provides the summary of specified values and options you have selected in the Restore Wizard.

What do I do next?

After you have reviewed the information on the Summary tab, click **Restore** to submit the restore job immediately, or click **Generate Script** to create a script you can use to run the job at a later time.

If you choose to run the restore job immediately, and want to verify a successful run, you can view its status in the Instance view. For more information, see [View backup/restore operation status](#).

What actions can I perform on the Summary tab?

Action	Steps
To immediately restore databases	Click Restore , and then highlight the instance or database in the tree pane to see the status of the operation.
To create a CLI restore script	Click Generate Script , and then click Command Line . To save the script to a file, click the save icon or the copy script to clipboard icon. SQLsafe creates a restore script using the settings you specified for the selected databases. You can use this script to perform future restores of any system or user database you selected. Click Close to return to the Restore Wizard.
To create a T-SQL restore script	Click Generate Script , and then click T-SQL . To save the script to file, click the save to a file icon or the copy script to clipboard icon. SQLsafe creates a restore script using the settings you specified. You can use this script to perform future restores of any system or user database you selected. Click Close to return to the Restore Wizard. This script requires the SQLsafe XSP. For more information on installing the SQLsafe XSP, see Deploy the SQLsafe XSP . For more information about how to use the SQLsafe XSP, see the sample scripts available from the Programs menu.

How do I verify the status of my restore?

If you want to verify that your restore operation successfully ran, you can view its status using the Instance view. For more information, see [View backup/restore operation status](#).
