Integrate SQLsafe with TSM

Use this TSM Guide to integrate SQLsafe into your existing TSM-based backup and recovery processes. SQLsafe interfaces with the TSM Client API, allowing you to backup and restore directly to the TSM Server while using the SQLsafe user interfaces. By integrating SQLsafe with your TSM deployment, you can immediately receive the benefits of fast, compressed, secure backups as well as several enterprise storage management features – without retooling your current archival workflow.

TSM integration checklist

⊌	Follow these steps
	Install the SQLsafe components, and review the supported TSM Client versions.
	Install the SQLsafe Backup Agent on each SQL Server instance on which backups will be performed.
	Install the TSM Client on the same SQL Server instances, and then configure each TSM Client to connect to the TSM Server. For more information, see the IBM TSM Backup-Archive Clients Installation and User's Guide.
	Ask your TSM Administrator to create a new management class for SQLsafe. For more information, see the IBM Tivoli Storage Manager for Windows Administrator's Guide.
	Perform a test backup and restore using SQLsafe with TSM settings.
	Create policy jobs to enforce consistent backup operations across your TSM environment.
