Reports permissions and requirements

Reports leverages the existing role-based security model provided with Reporting Services. Reports supports Windows Authentication only (mixed mode on SQL Server).

Reports requires the following permissions and rights to successfully generate reports on your backup and restore data. Assign the appropriate role on the SQL Safe folder in the Report Manager. The individual report files inherit the permissions you set.

By default, the Reports Installer utility deploys the report files to `Program Files\IDERA\SQLsafe Reporting Services` on the Report Server computer.

Account	Action	Requirements
Proxy user (specified in data source)	Connect to the SQL Safe Repository and read data per report parameters	Read access to the SQL Safe Repository database
Administrator	Configure reports and set security, run Installer utility	Content Manager role
End user (auditor or manager)	Generate and view reports	Browse role

For more information, on how to access the Report Manager, click Report Manager (SSRS Native Mode) .
