

# What alerts are available on the Home tab?

On this section of the SQL Safe **Home** tab, you can find a summary of your environment's alerts. SQL Safe groups these alerts by level of severity: OK (green), Informational (gray), Warning (yellow), Critical (red).

## What actions can you perform on Alert Rules?

In each Alert rule, you can find the following options:

- **Show Details** - to view the complete list of instances or databases affected by the alert rule. Use the option **Hide Details** to display only the summarized form of the alert rule.
- **Dismiss** - to ignore the alert rule with their associated alerts.
- **Refresh** - to get the latest status of the alert rule.

## What actions can you perform individually on each instance alert?

When you choose to **Show Details** of a specific alert rule, you can see all instances or databases associated with that specific alert rule. On each alert you can:

- **Dismiss** - to ignore the alert for that specific instance or database
- **Refresh** - to get the latest status of that specific alert

When you **Dismiss** an alert, it will not be displayed on the **Home** tab temporarily. SQL Safe will raise the alert when the alert rule condition triggers it again.

## What other actions can you perform on the Alerts section?

SQL Safe allows you to perform the following actions on the Alerts section of the **Home** tab:

- **Export** - you can export your information in any of the following formats: PDF, XLS, or XML. Additionally, you can choose from one of the following options:
  - **Summary of recommendation categories** - select this option to export all alert rules in their summarized version.
  - **Details for all recommendations** - select this option to export all alert rules information including the details of the instances or databases that are associated with them.
  - **Details for selected categories** - you can use this option to select those specific alert rule details you want to export.
- **Hide Recommendations** - use this option if you do not want to see the displayed alerts

## What SQL Safe alerts can you find?

To find out more about what alerts SQL Safe notifies you about, go to [Available Alerts](#) and view the complete list of alerts, their description, severity level, and links to the respective knowledge base articles.

SQL **Safe** is a high-performance backup and recovery solution for your SQL Servers. [Learn more](#) > >
