

Control data access using Row Count

In SQL Compliance Manager version 5.6.1 the Row count functionality may show as “Not Applicable”. The issue occurs when you execute large query and during execution the start and the end of the SQL Statement get captured in different trace files. Since both events are located in different trace files, SQL CM is not able to map these events and therefore displays that Row count is “Not Applicable”.

Users can increase the time of collection (default is set to 60 seconds) to capture Row count correctly

This feature is only **available** for SQL Server 2008 and above.

To capture row count information, **update** the SQL Compliance Manager Agent to version **5.5** or above.

IDERA SQL Compliance Manager audits and reports on the frequency that users access sensitive data, alerting about suspicious behavior.

The row count feature allows users to:

- Audit and capture row count for all event types and SQL statements.
- Audit and capture row count for joined query statements.
- Report on row count and access sensitive data.
- Set alerts based on thresholds for row counts, users, sensitive data, and specific queries.

Row count information is captured as part of an audit event and gathers information from both, traces and extended events.

Row count information does not show when capturing DML and SELECT activities using SQL Server audit specifications.

See row count information

The row count information is available in the [General tab](#) of any event properties, as well as the [Audit Events tab](#) in the [Explore Activity](#) view.

Row count information

For select statements with sensitive columns, event properties contain a [Sensitive Columns](#) tab which shows the row count value for each audited sensitive column.

When you expand the audit events, the [Audit Events](#) tab shows the row count information in the event details.

The screenshot shows the IDERA SQL Compliance Manager interface. The 'Audit Events' tab is selected. The main table displays a list of audit events. One event is expanded, showing a detailed view of the audit data. The expanded view includes a table with columns and row counts.

Page 1 of 1: 736 matching events

If you use SQL statements with joined queries, SQL Compliance Manager displays multiple (equivalent to the number of distinct queries joined) events, however, row count information is available only with the primary statement and not applicable with other statements.

Row count Alerts

IDERA SQL Compliance Manager allows you to set alerts on row count and data access. Alerts can be set by row count alone or adding a specific time interval.

For more information, see [Alert on Audit Data and Status](#).

- Change Log

Alert Rules

Registered SQL Servers | Alert Rules | Event Filters | SQL Logins | Activity Log | Change Log

Event Status Data Import From Existing Edit Details Export Enable Disable Delete

Rule Management Filter

Rule	Rule Type	Server	Level	Email	EventLo	SnmpTrap
Sensitive Data	Event	WIN-B5VL79U2ADV	Medium	No	No	No
Sensitive Column Accessed	Data	WIN-B5VL79U2ADV	Medium	No	Yes	No

3. Select Event and/or Data alerts

Rule Description (click an underlined value to edit)

1. Go to Administration

2. Go to Alert Rules

i If you use SQL statements with joined queries, only the primary statement triggers any alert set for row count.

Row count Reports

IDERA SQL Compliance Manager allows you to generate reports on data access, including the new row count feature. You can generate reports with the SQL Compliance Manager console and with Reporting Services.

For more information, see [Report on Audit Data](#).
