

# Add SQL Server instances

In order to manage an instance, access its details, and add it to your monitored environment, you need to register it with SQL Inventory Manager. This section helps you register one or more instances with SQL Inventory Manager.

You can find the **Add SQL Server Instance** option on the following views:

- **Overview** - Located in the top-right section of the Instances table.
- **Instances** - Located in the action items bar in each of the Managed, Discovered, Ignored, and SQL Licensing tabs.
- **Administration** - Located in the Instances section.

Below you can see the tabs and sections where you can find **Add SQL Server instances**. Click the image to view full size.

The Add Instance Wizard contains the following four sections:

## 1. Instance

To add an instance

1. Type the name of instance or instances you want to register in the **SQL Server Instance** box. Use a semicolon to separate multiple instances. Check **Cloud Instance** if you want to search for Cloud-based instances.

When you select instances on the **Discovered** or **Ignored** Instances views, the wizard already adds them to this box.

**Tips**

Specify the SQL Server instances you want to register with SQL Inventory Manager for monitoring. Separate multiple instances with a semicolon.

Use the Browse button to get a list of instance names discovered by the SQL Inventory Manager service.

Check the "Cloud Instance" box if you are adding instances hosted on a cloud service such as Azure or AWS.

2. Click **Next** to go to the next section.

The screenshot shows the 'INSTANCE' step of a four-step wizard. On the left, a 'Tips' sidebar provides instructions on specifying SQL Server instances, using the 'Browse' button, and checking the 'Cloud Instance' box for cloud-hosted instances. The main area is titled 'SQL Server Instance' and contains a text box with the instance name 'AUT-AG-NODE2\SQL2012\_CI;AUT-LOVEJOY\SQL2012;AUT-AG-NODE1\SQL2012\_CI;AUT-2012R2-004\SQL2012\_CS;AUT-2012R2-004\SQL2012\_CSEX;'. To the right of the text box is a 'BROWSE' button. Below the text box is a checkbox labeled 'Cloud Instance'. At the bottom right, there are three buttons: '<< PREV', 'NEXT >>', and 'CANCEL'.

## 2. Credentials

SQL Inventory Manager connects to registered SQL Server instances and their host computers to collect information. The collection service requires permissions to connect and gather information using the following types of connections:

- SQL connection credentials to perform queries against registered instances
- WMI connection credentials to gather data from the host computers

### Tip

For more information about the minimum required permissions for these accounts, see [Required accounts and permissions](#).

### Authorize WMI users and set permissions

If you want to know how to authorize WMI users and set permissions, see the Microsoft TechNet article, [Authorize WMI users and set permissions](#).

By default, SQL Inventory Manager connects using the SQL Inventory Manager Service Account. However, if you need to provide alternative credentials for any of these two connections, you can choose from the respective options on each section.

## SQL Connection Credentials

- Specify the type of account that you want to use to access your SQL Server instance and collect information. If you do not want to use the **SQL Inventory Manager service account**, select a **Windows user account** or **SQL Server login account** from the **Account Type** list.

**Tips** ?

*Specify the credentials used by SQL Inventory Manager to gather data about your instances. Choose whether you want to use the SQL Inventory Manager service account or an alternate account for each type of connection.*

*SQL Connection credentials are used to connect and perform queries against registered instances to collect configuration, availability, performance and capacity data.*

*WMI Connection credentials are used to connect to the instance's host computer to gather configuration and performance data. WMI credentials are not available for instances which are hosted on a cloud service such as Azure or AWS.*

- If you choose to use a **Windows user account**, type the respective user name and password. This account allows you to access Windows configuration data of the computer that hosts the registered instance.

Idera recommends that you use the **Test Credentials** option to verify that SQL Inventory Manager can successfully monitor the newly registered instances.

### 3. Information

On this section you can specify additional information for your instances like **Owner**, **Location**, **Comments**, and **Tags**.

Although none of these fields are required, Owner, Location, Comments, and Tags provide a powerful method for grouping instances and databases to help you organize your resources. Use these options to view information such as database counts, size, or activity, grouped by these fields.

Use the **Owner** and **Location** drop-down lists to access the available options.

**Tips** ?

Specify information to help you organize your managed instances.

SQL Inventory Manager will allow you to view and compare information about your instances by Owner, Location and Tags.

For example, this information will let you view data for all the SQL Servers in Houston, owned by the Accounting department or by SQL Server version.

Access the full list of tags by clicking the See All Tags link. You can specify one or more tags for a single instance.

- The tag name must begin with an upper or lowercase alphanumerical character.
- Your tag name must have a maximum length of 20 characters.

Only the following special characters are valid for tags: ! # @ ( ) ' . : - \_ and embedded spaces.

Refer to the [Managing Tags](#) section for more guidance on how to add, view, edit, or delete tags.

## 4. Finish

On this section, you can review your Instance Registration Details such as: instance name, SQL Connection Credentials, WMI Connection Credentials, Owner, Location, Comments, and Tags.

To change any of these registration details you can do one of the following:

- You can click any of the title sections (INSTANCE, CREDENTIALS or INFORMATION) and go directly to the place where you need to make the changes.
- You can click **PREV** to go back to the previous sections until you find the place where you need to make changes.

**Tips** ?

Review all the details of the SQL Server instances that you are registering. You can go back to previous steps if you want to change some information.

<< PREV FINISH CANCEL

After you review your registration details click **FINISH**. SQL Inventory Manager begins to collect instances information after a few minutes of their registration and will continuously collect availability, performance, and configuration information from them and their host computers.

### Tip

After registration, you can still change credentials, tags, and information settings on the **Edit Properties** option. Refer to [Editing instance properties](#) for more information.

## About collection intervals

Collection intervals are predefined. You can see more information about collection frequency on the [What Health Checks are available in SQL Inventory Manager?](#) section.

You can also force data collection for an instance by selecting **Refresh Data** on the **Instance details** view. For more information, refer to [Viewing instance details](#).
