

What login and password should you use to log in to SQL Inventory Manager?

! The Idera Dashboard Web Application service comes with SSL already set up. By default, SSL works with a self-signed certificate. **This certificate is available for encryption only and does not prove the identity of the server.**

That default certificate is not signed by any well-known Certification Authority (CA), and is intended for use only in testing purposes. When a user attempts to open the SSL version of the Idera Dashboard web console, the browser displays a warning message. For more information about running Idera Dashboard over SSL, see [Run Idera Dashboard over SSL \(HTTPS\)](#).

When SQL Inventory Manager launches on your browser, log in using your Windows user account with the respective password. Type the Windows user account in the following format: `<domain\username>`.

The following image shows the SQL IM log-in window.

i Although SQL IM uses Windows authentication when users log in, SQL IM does not store passwords.

Session timeout

SQL IM sessions do time out after a period of rest. Note that:

- Sessions do not expire if you remain on the application.
- If you leave the application for more than 30 minutes, the session times out and you must log in to regain access.
