

## How does SQL Business Intelligence Manager help me?

Knowing the behavior of your reports or your ETL jobs, you can grant your job. But, would you like to take control of them and avoid getting stuck?.

SQL Business Intelligence Manager allows you to take control of your BI infrastructure. Having insight into your SQL Server Analysis Services, SQL Server Reporting Services, and SQL Server Integration Services environments, you can easily identify issues and fix them quickly, optimizing your business environment.

SQL BI Manager is a state-of-the-art tool that provides:

- **Broad visibility into SQL Business Intelligence services** with over 140 metrics pertaining to the health and availability of the services and the servers they reside on.
- **Dashboard views** display data across the entire BI environment and provide drill down capabilities to obtain more details.
- **Alerts** keep you updated about the status of your BI environment so you can take corrective action as needed.
- **Role based security** makes easy to give and restrict access to SQL BI Manager, based on a user's role in the organization.
