

# Event Properties window - Data Change tab

This tab allows you to review how column values changed as a result of the selected event.

This tab is available only when you are collecting before and after data. For more information about collecting before and after data, see [Audited Database Properties window - Before-After Data tab](#).

To scroll from one event to the next, use the up and down arrows.

To copy the event details to another application, click **Copy**. This action copies the event details to your clipboard, allowing you to paste the contents into another application such as Microsoft Word.

## Available columns

**Row #**

Provides the ordered number of the change in the data change set. For example, a DML operation results in seven rows changing. In the **Row #** field, these rows are numbered 1-7 in the order in which each change occurred. You can limit the number of recorded changes for a given operation in the [Configure Table Auditing window](#).

**Primary Key**

Provides the name of the column that uniquely identifies this table. For more information about primary keys, see Microsoft Books Online.

**Column Name**

Provides the name of the column affected by the event.

**Before Data**

Provides the value before this column changed.

**After Data**

Provides the value after this column changed.
