

Check Repository Integrity window

The Check Repository Integrity window allows you to check for unexpected changes in your audit data, detecting when events are modified, added, or deleted by a script or an application other than IDERA SQL Compliance Manager.

To verify repository integrity, select the Repository database you want to verify, and then click **OK**. To perform an integrity check on an archive database, click **Show archive databases**.

SQL Compliance Manager audits all activity on your server. [Learn more](#) > >
