Host Memory Swap Detected alert

The Host Memory Swap Detected alert indicates that memory is swapped to disk for the host server hosting the virtual machine on which the monitored SQL Server resides. This may be an indication of memory pressure on the host. This alert is disabled by default and is only relevant to instances hosted on VMWare vCenter which have been enabled for VM monitoring in the SQLdm VM Configuration window.

SQL Diagnostic Manager identifies and resolves SQL Server performance problems before they happen. Learn more > >
