

Disable auditing on a database

You can disable auditing on any database associated with a registered SQL Server instance. When you disable auditing, IDERA SQL Compliance Manager stops the SQL trace but leaves the trace file directory intact. You can continue reporting on audit data stored in the Repository and archive databases.

Although alert rules that monitor this database will remain enabled, no alert messages will be generated because no new audit data will be collected.

To disable auditing on a database, select the database in the **Explore Activity** tree, and then click **Disable Auditing** in the Summary tab. This action disables auditing at the database level only.

SQL Compliance Manager audits all activity on your server. [Learn more > >](#)
