

Viewing your jobs on the Schedule tab

SQL Enterprise Job Manager displays in the **Schedule** tab all your instances, jobs, tasks, and job chains across your environment. It also displays them in an Outlook Calendar view.

You can choose to see your jobs and tasks according to a combination of **Start / End Date** filter and **Start / End Time** filter. There are varying views available, such as **Daily**, **Weekly**, **Monthly**, or **Snapshot** to filter the information according to your requirements.

Go to the next section to see a more detailed description of this tab and what actions you can execute.
