

# Managing alert rules

SQL Enterprise Job Manager displays alerts that warn you about the status of your instances and jobs. These alerts depend on alert rules that you can configure and customize according to your requirements.

Use the option **Manage Alert Rules** under the Alert Rules section of the **Administration tab** to access the **Alert Rules** tab where you can manage all these settings.

For more information on what is available on the **Alert Rules** tab, go to [Managing Alerts](#).
