

New features and fixed issues

New Features in version 2.4

Audit Log View

SQL Enterprise Job Manager added a new [Audit Log](#) tab that captures all the changes done through SQL Enterprise Job Manager. The [Audit Log](#) tab records the changes in logs, showing information such as

- Date Time
- User Info
- Event Details (Created, Deleted, Updated information)

Job Chaining

SQL Enterprise Job Manager now allows users to merge two or more job chains and add multiple jobs at a time using an existing job chain.

Job's Action

The new "Copy Job" option allows users to copy a job to new instances with the option to change tokens with provided values.

Fixed Issues in version 2.4

Job Chaining

SQLENTE-4797

SQL Enterprise Job Manager now allows users to branch multiple Jobs with a Job Chain.
