

Welcome to SQLdm

SQL diagnostic manager is a powerful performance monitoring and diagnostics solution that proactively alerts administrators to health, performance and availability problems within the SQL Server environment. SQL diagnostic manager now integrates with the Idera Dashboard, a common technology framework, designed to support the Idera product suite. Users are able to obtain an overview of the status of their SQL Servers and hosted databases all in a consolidated view and navigate to individual product dashboards for details. The Idera Dashboard provides a central set of services for managing users, product registry, instance registry, aggregated alerts across Idera applications, a central web server, and tags for grouping instances. For additional information, see [Navigate the Idera Dashboard](#).

To get started, see the following topics for more information:

- [Upgrade to this build of SQL diagnostic manager](#)
- [Configure SQL diagnostic manager](#)
- [Migrate your SQLdm installation](#)

SQL **D**agnostic **M**anager identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
