

# Other Waits

This metric includes any additional waits occurring on this SQL Server outside of the following wait categories:

- I/O
- [Locks](#)
- [Memory](#)
- [Signal](#)

Waits are a measurement of throughput on the SQL Server computer processor, as determined by the SQL Server workload. To get more details about monitored wait statistics, see the [Server Waits view](#), and review the Microsoft Best Practice Article [SQL Server Waits and Queues](#).
