

Configure your deployment

After your initial installation and set up of IDERA SQL Secure, you may want to perform the following tasks to further customize and streamline your deployment.

- [Connect to your SQL Secure Repository](#)
- [Set up weak password detection to audit password health](#)
- [Use filters to specify which data is collected](#)
- [Use snapshots to collect audit data](#)
- [Register your SQL Server instances](#)

SQL Secure tells you who has access to what on your SQL Server databases. [Learn more](#) > >
