

Change SQL Servers audited by assessment

The **Audited SQL Servers** tab allows you to change which registered SQL Server instances are assigned to this assessment within IDERA SQL Secure. You can add or remove instances from this assessment to better match your current auditing needs. Each registered SQL Server instance can belong to multiple assessments.

Edit the instance list, and then click **OK**. SQL Secure automatically re-runs the assessment based on this new scope.

SQL Secure tells you who has access to what on your SQL Server databases. [Learn more > >](#)
