

# Import statements to tuning

The profiling feature lets you submit one or more SQL tab statements for tuning by the tuning feature. This lets you take advantage of tuning's hint-based and transformation-based suggestions, detailed execution statistics, and explain plan costing, in tuning a statement.

To open a tuning job on a statement appearing on the SQL tab of the profiling editor

- Select one or more statements, right-click and select **Tune** from the context menu. Tuning opens on the selected statement.

For more information, see [Tuning SQL statements](#) in the *Using Tuning* section of this guide.
