

Specify VST Diagrams Tuning preference

The preferences on this page allow you to change the default presentation of count information and sub-query names in Visual SQL Tuning diagrams.

Using the SQL Optimization perspective, select **Preferences > Tuning Job Editor > VST Diagrams**.

- **Show count information.** If enabled, shows the ratios and count information when the VST diagram is generated. If not enabled, you must click the **Ratios/Counts** icon () on the VST diagram to view ratio and count information.
- **Hide sub-query names when expanded.** If enabled, shows the sub-query name when the VST diagram is generated. If not enabled, you must right-click anywhere in the VST and from the menu that appears, choose Show Query Names.
