Updating the database version

There is a series of steps you first must complete when updating the database version.

To update the database version

1. Open the following files:
   `products\i3fp\registry\connection-pools\jdbc\pools.xml`
   and
2. `products\i3fp\registry\products\pw\focalpoint.xml`
3. Update the database version entry in both of these files.
4. Save the files, and then restart the PMDB FocalPoint.
