Load request document format

- [<rowsets> tag (Load request)](#)

The general format of a load request document looks as follows:

- `<rowsets>` tag. This is the root element of a load request document. Its children are the actual loaded table and the statement to perform during the load process: `<rowset>` and `<statement>`.
  - `<rowset>` tag. This tag includes the connection-pool attribute indicating the pool into which to load the data. The value of the connection-pool attribute should always be `pw`.
    The `<rowset>` tag also includes the mandatory object attribute, which indicates the name of the loaded object (such as a table name or a view name if the view is loadable), and other optional attributes described later.
  - `<statement>` tag. This tag is used to issue SQL commands during the load process, such as performing an update on a control table or an additional insert that is not part of the load process.

ⓘ   DO NOT enter blanks, nor new lines between the tags.
