

Using the Restore Wizard

The SQL Safe Backup web console allows you to access the **Restore Wizard** from the following sections:

- **Home** tab.
- **Instances** tab.
- **Databases** tab.

When you click the **Restore** option from any of the previous locations, SQL Safe Backup prompts you to choose a restore operation for:

- [Database\(s\)](#) or
- [Object Level Recovery](#)

 Take into account that the Restore option is not available for **Guest** role users.
