Unmount a Virtual Database CLI Commands

SQL Safe provides you with CLI commands to help you unmount a virtual database.

To unmount a virtual database use the following command that helps you to delete a virtual database:

- SQLsafeCmd UnmountVDB <db_name> [options]

Where:

Action	Description
<db_name>	Name of the database.

Common Options

The following options help you delete a virtual database:

Options	Descriptions
-InstanceName <name>	<name> - SQL server instance name. Note: it is not required if the instance is set as a default on the target server.

For detailed descriptions and available options, see the CLI Help (`SQLsafeCmd help UnmountVDB`).
