

What login and password should you use to log in to SQL Elements?

When SQL Elements launches on your browser, you should use your Windows user account with the respective password to log in to the product.

You should use the following format: **<domain\user>**.

A screenshot of the SQL Elements login page. On the left is the 'idera SQL Elements' logo. The main area is a dark grey box with a faint background pattern of database-related icons. It contains two white input fields: the first is labeled 'Domain\user name' and the second is labeled 'Password'. Below these fields is an orange 'LOG IN' button.

Although SQL Elements uses Windows authentication when users log in, it never stores passwords.

Session timeout

Take into account:

- Your session does not expire if you remain on the application.
- If you leave the application for more than thirty minutes, the session times out and you have to log in again.
