

Deadlock Report

The Deadlock report lets you analyze deadlocks on your SQL Server instance.

When to run this report

By analyzing the deadlocks, you can better determine where deadlocks are occurring and analyze the changes can have the greatest performance impact.

The report filters the data by Instance Name, followed by Application Name, Database Name, SQL Statement, Collection Date, XDL Data, Deadlock ID, Login Name, and Host Name.

This report lists all the deadlock occurrences historically and in detail.

SQL Diagnostic Manager for SQL Server performance monitoring, alerting, and diagnostics for SQL Server.
