# Upgrade the Lite or Freeware Edition

The Management Console detects when a registered SQL Server instance is running SQL Safe Lite or SQL Safe Freeware Edition. You can upgrade the Backup Agent to the current version of SQL Safe enterprise edition using one of the following methods:

- Deploy the current version of the agent. For more information, see Install SQL Safe Backup Agent.
- Select the instance in the Servers tree, and then click **Enable trial license** on the Instance View. This upgrades the license to an enterprise edition trial license.
- Click **Upgrade** on the SQL Safe Agent Properties window. For more information, see Modify Backup Agent properties.

When you upgrade the Backup Agent, SQL Safe deploys the current version of the Backup Agent with a trial license enabled. The trial license allows you full access to the SQL Safe enterprise features for all SQL Server instances hosted on that computer. The trial license is a limited-time, limited-instance license that you will need to upgrade with a production license key.

SQL Safe is a high-performance backup and recovery solution for your SQL Servers. Learn more > >
