

What alerts are available on the Home tab?

On this section of the SQL Safe **Home** tab, you can find a summary of your environment's alerts. SQL Safe groups these alerts by level of severity: OK (green), Informational (gray), Warning (yellow), Critical (red).

What actions can you perform on Alert Rules?

In each Alert rule, you can find the following options:

- **Show Details** - to view the complete list of instances or databases affected by the alert rule. Use the option **Hide Details** to display only the summarized form of the alert rule.
- **Dismiss** - to ignore the alert rule with their associated alerts.
- **Refresh** - to get the latest status of the alert rule.

What actions can you perform individually on each instance alert?

When you choose to **Show Details** of a specific alert rule, you can see all instances or databases associated with that specific alert rule. On each alert you can:

- **Dismiss** - to ignore the alert for that specific instance or database
- **Refresh** - to get the latest status of that specific alert

When you **Dismiss** an alert, it will not be displayed on the **Home** tab temporarily. SQL Safe will raise the alert when the alert rule condition triggers it again.

What other actions can you perform on the Alerts section?

SQL Safe allows you to perform the following actions on the Alerts section of the **Home** tab:

- **Export** - you can export your information in any of the following formats: PDF, XLS, or XML. Additionally, you can choose from one of the following options:
 - **Summary of recommendation categories** - select this option to export all alert rules in their summarized version.
 - **Details for all recommendations** - select this option to export all alert rules information including the details of the instances or databases that are associated with them.
 - **Details for selected categories** - you can use this option to select those specific alert rule details you want to export.
- **Hide Recommendations** - use this option if you do not want to see the displayed alerts

What SQL Safe alerts can you find?

To find out more about what alerts SQL Safe notifies you about, go to [Available Alerts](#) and view the complete list of alerts, their description, severity level, and links to the respective knowledge base articles.

SQL **Safe** is a high-performance backup and recovery solution for your SQL Servers. [Learn more](#) > >
