

Remove a Virtual Database

You can remove a Virtual Database by following these steps:

1. Open the Operation History tab.
2. Locate the VDB you want to delete.
3. Click the  located at the end of the row.
4. Select Remove VDB from the displayed options.
5. The message windows Remove Virtual Database displays confirming the name of the VDB you selected to remove.
6. Click Yes to remove; otherwise, click No to go back to the listing in the Operation History tab.

To complete the removal of a VDB, go to the Virtual Database tab, select **Settings**, and click **Clean Up** to remove all the unused files by SQLvdb.

 This feature is also available through the [Cleanup](#) action in the command line interface (CLI). To get more information, enter `SQLvdbCmd` in the Windows Command Prompt.

 Also, you can remove a VDB you created in SQL Server Management Studio.

For detailed descriptions and available [virtual database options](#), see the CLI Help (`SQLvdbCmd help <action>`).

SQL **Safe** is a high-performance backup and recovery solution for your SQL Servers. [Learn more >>](#)
