

## Name the restore policy

The General tab of the Restore Policy wizard allows you to specify the basic properties of the restore policy.

Why should you specify a name or description?

You are required to enter a unique name for each policy.

Both the name and description will appear in the status messages for your policies. Using a meaningful name and description will allow you to more easily identify problems when they occur. For example, consider specifying a description that will help you later choose the correct restore operation to monitor during a disaster recovery situation.

What options do you have for creating a restore policy?

When you create a restore policy, you can choose from between the two following options:

- Create Restore Jobs using the SQL Server Agent.
- Create Restore Jobs using the SQL Safe Backup Agent.

SQL **Safe** is a high-performance backup and recovery solution for your SQL Servers. [Learn more](#) > >
