

## Port requirements

### IDERA SQL Safe Ports

The SQL Safe Backup services use specific ports to communicate to each other as well as other SQL Safe Backup components. Before installing SQL Safe Backup, ensure the following ports are available:

| Service                     | Port for trusted domains | Port for non-trusted domains |
|-----------------------------|--------------------------|------------------------------|
| SQL Safe Backup Service     | 5164                     | 5165                         |
| SQL Safe Collection Service | 9299                     | 9299                         |
| SQL Safe Management Service | 5162                     | 5163                         |
| SQL Safe Rest Service       | 9998                     | 9998                         |

SQL Safe Backup automatically detects whether its components have been installed in trusted or non-trusted domains.

### IDERA Dashboard Ports

The IDERA Dashboard services use specific ports for communication. Before installing the IDERA Dashboard, ensure the following ports are available:

| Service   | Port |
|---|------|
| IDERA Dashboard Core Service                      | 9292 |
| IDERA Dashboard Web Application Service (HTTP)    | 9290 |
| IDERA Dashboard Web Application Service (HTTPS)   | 9291 |
| IDERA Dashboard Web Application Service (Monitor) | 9094 |
