

Viewing Health Check Recommendations for a specific instance

When you go to the Instance Details view for a specific instance, you can find a report of the health check recommendations. These health check recommendations are grouped by type and ordered by level of criticality; where:

- Level 3 = Critical
- Level 2 = Warning
- Level 1 = Informational

You can click **Show Details** or click the name of the health check recommendation to access the following options:

- List of databases affected by the health check
- Individually **Dismiss** the health check recommendation for a database
- Individually **Refresh** the status of a database
- Knowledge base of the health check recommendation
- Link to more information about the health check recommendation

If you do not want to see these details, click **Hide Details**. To hide all health check recommendations for this instance, click **Hide recommendations** on the action items bar.

You can also **Dismiss** or **Refresh** at the level of the whole health check recommendation.

Dismissing health check recommendations

When you dismiss a health check recommendation, you do it temporarily and SQL Inventory Manager ignores it until the health check passes and goes into an alert status again.

Exporting Health Check Recommendations

If you want to export Health Check Recommendations, click **Export** on the action items bar and choose from the following options:

- Export summary of recommendation categories
- Export details for all recommendations
- Export details for selected categories

Then choose the format for exporting: **PDF**, **XLS**, or **XML**. Click **Export**.

SQL Inventory Manager allows you to export the specific information that you need for the instance that you select so you can perform a better assessment of your environment. For more information about exporting in SQL Inventory Manager, click [here](#).

The screenshot displays the SQL Inventory Manager (SIM) interface. At the top, the user is logged in as 'Simpsons\Administrator'. The main navigation bar includes 'DASHBOARD', 'OVERVIEW', 'EXPLORER', 'INSTANCES', and 'ADMINISTRATION'. The 'INSTANCES' tab is selected, showing a list of instances. The instance 'AUT-HOOVER\SQL2012' is highlighted, and its details are shown on the right. The 'Health Recommendations' section indicates that there are 266 health check recommendations. The recommendations are grouped by type and ordered by level of criticality. The following table summarizes the recommendations shown:

Level	Recommendation	Action
LEVEL 3	56 databases data files at risk of filling up.	Show Details Dismiss Refresh
LEVEL 3	Volume C:\ on instance AUT-HOOVER\SQL2012 is filling up.	Show Details Dismiss Refresh
LEVEL 3	2 databases do not have a backup.	Hide Details Dismiss Refresh
LEVEL 3	98 databases do not have a current backup.	Show Details Dismiss Refresh
LEVEL 3	100 databases consistency has never been checked.	Show Details Dismiss Refresh

The 'INSTANCE SUMMARY' section on the right provides details about the instance, including its name, edition, memory, and databases. The 'SERVER SUMMARY' section at the bottom shows the host server and inventory tag.

Tip

When you dismiss a health check recommendation, a dialog window opens to confirm this action, you can enable the option **Do not show this warning again** so that SQL Inventory Manager does not prompt this warning message every time you dismiss a health check recommendation.
