

Viewing Health Check Recommendations for a specific instance

When you go to the Instance Details view for a specific instance, you can find a report of the health check recommendations. These health check recommendations are grouped by type and ordered by level of criticality; where:

- Level 3 = Critical
- Level 2 = Warning
- Level 1 = Informational

You can click **Show Details** or click the name of the health check recommendation to access the following options:

- List of databases affected by the health check
- Individually **Dismiss** the health check recommendation for a database
- Individually **Refresh** the status of a database
- Knowledge base of the health check recommendation
- Link to more information about the health check recommendation

If you do not want to see these details, click **Hide Details**. To hide all health check recommendations for this instance, click **Hide recommendations** on the action items bar.

You can also **Dismiss** or **Refresh** at the level of the whole health check recommendation.

Dismissing health check recommendations

When you dismiss a health check recommendation, you do it temporarily and SQL Inventory Manager ignores it until the health check passes and goes into an alert status again.

Exporting Health Check Recommendations

If you want to export Health Check Recommendations, click **Export** on the action items bar and choose from the following options:

- Export summary of recommendation categories
- Export details for all recommendations
- Export details for selected categories

Then choose the format for exporting: **PDF**, **XLS**, or **XML**. Click **Export**.

SQL Inventory Manager allows you to export the specific information that you need for the instance that you select so you can perform a better assessment of your environment. For more information about exporting in SQL Inventory Manager, click [here](#).

The screenshot shows the SQL Inventory Manager (SIM181) interface. The top navigation bar includes 'DASHBOARD', 'OVERVIEW', 'EXPLORER', 'INSTANCES', and 'ADMINISTRATION'. The 'INSTANCES' tab is selected, showing the 'INSTANCE DETAILS' for 'AUT-HOOVER\SQL2012'. The main content area displays a list of health check recommendations, each with a level (e.g., Level 3) and a description. For example, '56 databases data files at risk of filling up' and 'Volume C:\ on instance AUT-HOOVER\SQL2012 is filling up'. Each recommendation has a 'Show Details', 'Dismiss', and 'Refresh' button. The 'Exporting reports' button is also visible. The right sidebar shows the 'INSTANCE SUMMARY' and 'SERVER SUMMARY' sections, providing details about the SQL Server instance, including its version, memory, and configuration.

Tip

When you dismiss a health check recommendation, a dialog window opens to confirm this action, you can enable the option **Do not show this warning again** so that SQL Inventory Manager does not prompt this warning message every time you dismiss a health check recommendation.
