

Manage health checks - SQL Server is Down

The **SQL Server is down** health check alerts you when IDERA SQL Inventory Manager is unable to connect to your SQL Server. Click **Configure** in the Manage Health Checks window, and IDERA SQL Inventory Manager displays the Update Health Check - SQL Server is down window.

Make the appropriate changes, and then click **Save**.

**Tips**

SQL Server is down alert is thrown when a server has been down for more than 30 seconds. You can change this threshold by modifying the value for down time.

Please note this change will apply to all monitored servers and you will not see an alert on the dashboard until the new threshold has been met or exceeded.

Update Health Check - SQL Server is down

Currently the SQL Server is down alert will be thrown if the server is down for 30 seconds

To change this setting select the SQL Server down time to alert when the database has been down for more than:

30 sec (Default)

You will not see an alert on the dashboard for SQL Server is down until the down time has met or exceed the selected threshold time
